

API compliance report

A question, comment or proposal, join us on [Mattermost "API Factory Support"](#)

Generated on **Sunday, April 20, 2025 18:58:13 CET**

API: ProductCatalogManagement 2.0.0_inProgress

Recommendation: TMF 630 Guidelines v4.0.1 [🔗](#)

1. Compliance summary report

Compliance level estimation: **90 %**

Number of rules with blocking items: **1**

In order to improve the compliance of your API before its exposition on our API Gateway,

- all detected blocking items **must** be fixed
- all applicable rules with a level of importance ★★★★★ and ★★★★☆ **must** be compliant
- rules with the level of importance ★★★☆☆ **should** be compliant
- rules with the level of importance ★★☆☆☆ **may** be compliant

1.1. Compliance by level of importance

Level of importance	# of rules	# of rules with full compliance	# of rules with partial compliance	# of rules without compliance	# of rules not applicable
mandatory ★★★★★	1	0	0	1	0
strongly recommended ★★★★☆	36	14	3	4	15
recommended ★★★☆☆	2	0	0	0	2
for information only ★★☆☆☆	1	0	1	0	0

1.2. Compliance grid

Rule patterns:

- TMF-PxCyPz: rule refers to TMF 630 Guidelines Part x, Chapter y and Paragraph z
- TMF-OAR-x: Orange Additional Rule

Rule	Summary	Level of importance	Compliance	Blocking items	Comments
🔗 TMF-P1C1P5	General: request and response HTTP headers must be valid	☆☆	Not applicable		
🔗 TMF-P1C2P2	Domain and URI naming standards: resource model and naming - Variable path segments contain unique resource identifiers only	☆☆☆	Yes		
🔗 TMF-P1C2P3	Domain and URI naming standards: resource ID and href are mandatory attributes	☆☆☆	Partial		- compliant items: 4 - not compliant items: 4
🔗 TMF-P1C2P4	Domain and URI naming standards: resource naming convention must be followed	☆☆☆	Yes		
🔗 TMF-P1C2P5	Domain and URI naming standards: resource fields convention must be followed	☆☆☆	Partial		- compliant items: 731 - not compliant items: 2
🔗 TMF-P1C3P1	Uniform contract methods and media types: uniform contract operations	☆☆☆	Yes		
🔗 TMF-P1C3P3	Uniform contract methods and media types: API response status - Never define nor use custom status codes	☆☆☆	Yes		
🔗 TMF-P1C3P4-1	Uniform contract methods and media types: user, application and extended error codes - Errors must set HTTP error status, never 2xx	☆☆☆	Yes		
🔗 TMF-P1C3P4-2	Uniform contract methods and media types: user, application and extended error codes - Error representation in response body must match recommended structure	☆☆☆☆	No	64	
🔗 TMF-P1C3P5	Uniform contract methods and media types: representations - No file extensions (e.g. .js, .json) to path segment, media type selection must be signaled with Accept header	☆☆☆	Yes		
🔗 TMF-P1C4P1	Query resources patterns: query single resource all attributes	☆☆☆	Yes		
🔗 TMF-P1C4P2	Query resources patterns: query multiple resources	☆☆☆	Yes		
🔗 TMF-P1C4P3	Query resources patterns: query partial resource representation or attribute selection	☆☆☆	Yes		
🔗 TMF-P1C4P4	Query resources patterns: query resources with attribute filtering	☆☆☆	Yes		
🔗 TMF-P1C4P5	Query resources patterns: paging	☆☆☆	No		
🔗 TMF-P1C4P7	Query resources patterns: sorting	☆☆☆	Yes		
🔗 TMF-P1C5P1	Modify resources patterns: uniform contract operations for modifying resources	☆☆☆	Yes		

Rule	Summary	Level of importance	Compliance	Blocking items	Comments
🔗 TMF-P1C5P2	Modify resources patterns: replace all attributes of a resource	☆☆☆	Not applicable		
🔗 TMF-P1C5P3P4P5	Modify resources patterns: modify attribute subset of a resource, modify multi-valued attribute, JSON-Patch extension to manage arrays	☆☆☆	Not applicable		
🔗 TMF-P1C6P1	Create resource patterns: creating a single resource	☆☆☆	Not applicable		
🔗 TMF-P1C6P2	Create resource patterns: creating multiple resources	☆☆☆	Not applicable		
🔗 TMF-P1C6P3	Create resource patterns: creating a single resource with attribute selection	☆☆☆	Not applicable		
🔗 TMF-P1C7	Delete resource pattern	☆☆☆	Not applicable		
🔗 TMF-P1C8P1	Task resource pattern: modeling complex operations with task resources	☆☆☆	Not applicable		
🔗 TMF-P1C9	Monitor pattern	☆☆☆	Not applicable		
🔗 TMF-P1C10P1P2	Notification patterns: register/unregister listener	☆☆☆	Not applicable		
🔗 TMF-P1C10P3	Notification patterns: publishing events	☆☆☆	Not applicable		
🔗 TMF-P1C11P1	Versioning: API version must be defined in the base path	☆☆☆	Yes		
🔗 TMF-P1C12P3	Event management: event resource	☆☆☆	Not applicable		
🔗 TMF-P1C12P4	Event management: topic resource	☆☆☆	Not applicable		
🔗 TMF-P4C1P1	Export and import data tasks: export job resource	☆☆☆	Not applicable		
🔗 TMF-P4C1P2	Export and import data tasks: import job resource	☆☆☆	Not applicable		
🔗 TMF-OAR-1	[Orange Specific] GET /status operation returns service status info	☆☆☆	No		
🔗 TMF-OAR-2	[Orange Specific] GET /doc URI returns Swagger JSON file representation	☆☆☆	No		
🔗 TMF-OAR-3	[Orange Specific] GET /version operation returns information about the version	☆	Partial		- items to check manually: 1
🔗 TMF-OAR-4	[Orange Specific] Prefix custom header names using X-<service>-* pattern (e.g. X-ISS-Key where ISS means for IoT Service Suite)	☆☆	Not applicable		
🔗 TMF-OAR-5	[Orange Specific] The server is reachable via a DNS name	☆☆☆	Yes		
🔗 TMF-OAR-6	[Orange Specific] The API is a unique dedicated sub-domain or path	☆☆☆	No		
🔗 TMF-OAR-7	[Orange Specific] Use Location header to return the URI of the newly created resource	☆☆☆	Not applicable		

Rule	Summary	Level of importance	Compliance	Blocking items	Comments
🔻 TMF-OAR-8	[Orange Specific] API documentation complies with Swagger 2.0 or OpenAPI 3.0 specifications and Orange recommendations	★ ★ ★	Partial		- not compliant items: 25 - items to check manually: 48

2. Assumptions

Summary: Resource types

In order to be able to apply some rules, the compliance service tries to determine the type of resource represented by each path

Item	JSONPath Location	Comments
/productOffering	['paths']['/productOffering']	- According to HTTP methods used and/or the path format, the path represents a collection
/productOffering/{id}	['paths']['/productOffering/{id}']	- According to HTTP methods used and/or the path format, the path represents a single resource
/productOfferingPrice	['paths']['/productOfferingPrice']	- According to HTTP methods used and/or the path format, the path represents a collection
/productOfferingPrice/{id}	['paths']['/productOfferingPrice/{id}']	- According to HTTP methods used and/or the path format, the path represents a single resource
/productSpecification	['paths']['/productSpecification']	- According to HTTP methods used and/or the path format, the path represents a collection
/productSpecification/{id}	['paths']['/productSpecification/{id}']	- According to HTTP methods used and/or the path format, the path represents a single resource
/productConfigurationSpec	['paths']['/productConfigurationSpec']	- According to HTTP methods used and/or the path format, the path represents a collection
/productConfigurationSpec/{productConfigurationSpecId}	['paths']['/productConfigurationSpec/{productConfigurationSpecId}']	- According to HTTP methods used and/or the path format, the path represents a single resource

3. Compliance

Rule: **TMF-P1C1P5**

Summary: **General: request and response HTTP headers must be valid**

Level of Importance: **recommended** ★★

Item	JSONPath Location	Compliance	Comments
Not applicable			

Rule: **TMF-P1C2P2**

Summary: **Domain and URI naming standards: resource model and naming - Variable path segments contain unique resource identifiers only**

Level of Importance: **strongly recommended** ★★★

Item	JSONPath Location	Compliance	Comments
/productOffering	\$['paths']['/productOffering']	✓	
/productOffering/{id}	\$['paths']['/productOffering/{id}']	✓	
/productOfferingPrice	\$['paths']['/productOfferingPrice']	✓	
/productOfferingPrice/{id}	\$['paths']['/productOfferingPrice/{id}']	✓	
/productSpecification	\$['paths']['/productSpecification']	✓	
/productSpecification/{id}	\$['paths']['/productSpecification/{id}']	✓	
/productConfigurationSpec	\$['paths']['/productConfigurationSpec']	✓	
/productConfigurationSpec/{productConfigurationSpecId}	\$['paths']['/productConfigurationSpec/{productConfigurationSpecId}']	✓	

Rule: **TMF-P1C2P3**

Summary: **Domain and URI naming standards: resource ID and href are mandatory attributes**

Level of Importance: **strongly recommended** ★★★

Item	JSONPath Location	Compliance	Comments
GET /productOffering - Response 200	\$['paths']['/productOffering']['get']['responses']['200']	✓	
GET /productOffering/{id} - Response 200	\$['paths']['/productOffering/{id}']['get']['responses']['200']	✓	

Item	JSONPath Location	Compliance	Comments
GET /productOfferingPrice - Response 200	\$['paths']['/productOfferingPrice']['get']['responses']['200']	✗	- In the response body, the following errors have been detected: - the definition does not match a schema representing an array containing resources with id and href properties - \$.items.properties.id: is missing but it is required
GET /productOfferingPrice/{id} - Response 200	\$['paths']['/productOfferingPrice/{id}']['get']['responses']['200']	✗	- In the response body, the following errors have been detected: - the definition does not match a schema representing a resource with id and href properties - \$.properties.id: is missing but it is required
GET /productSpecification - Response 200	\$['paths']['/productSpecification']['get']['responses']['200']	✓	
GET /productSpecification/{id} - Response 200	\$['paths']['/productSpecification/{id}']['get']['responses']['200']	✓	
GET /productConfigurationSpec - Response 200	\$['paths']['/productConfigurationSpec']['get']['responses']['200']	✗	- In the response body, the following errors have been detected: - the definition does not match a schema representing an array containing resources with id and href properties - \$.items.properties.href: is missing but it is required
GET /productConfigurationSpec/{productConfigurationSpecId} - Response 200	\$['paths']['/productConfigurationSpec/{productConfigurationSpecId}']['get']['responses']['200']	✗	- In the response body, the following errors have been detected: - the definition does not match a schema representing a resource with id and href properties - \$.properties.href: is missing but it is required

Rule: TMF-P1C2P4

Summary: **Domain and URI naming standards: resource naming convention must be followed**

Level of Importance: **strongly recommended** ★★☆☆

Item	JSONPath Location	Compliance	Comments
/productOffering	\$['paths']['/productOffering']	✓	
/productOffering/{id}	\$['paths']['/productOffering/{id}']	✓	
/productOfferingPrice	\$['paths']['/productOfferingPrice']	✓	
/productOfferingPrice/{id}	\$['paths']['/productOfferingPrice/{id}']	✓	
/productSpecification	\$['paths']['/productSpecification']	✓	
/productSpecification/{id}	\$['paths']['/productSpecification/{id}']	✓	
/productConfigurationSpec	\$['paths']['/productConfigurationSpec']	✓	
/productConfigurationSpec/{productConfigurationSpecId}	\$['paths']['/productConfigurationSpec/{productConfigurationSpecId}']	✓	

Rule: TMF-P1C2P5

Summary: **Domain and URI naming standards: resource fields convention must be followed**

Level of Importance: **strongly recommended** ★★☆☆
