

API compliance report

A question, comment or proposal, join us on [Mattermost "API Factory Support"](#)

Generated on **Wednesday, April 1, 2026 09:32:38 CET**

API: Product Inventory Management 0.23.0

Recommendation: TMF 630 Guidelines v4.0.1 [🔗](#)

1. Compliance summary report

Compliance level estimation: **95 %**

Number of rules with blocking items: **0**

In order to improve the compliance of your API before its exposition on our API Gateway,

- all detected blocking items **must** be fixed
- all applicable rules with a level of importance ★★★★★ and ★★★★☆ **must** be compliant
- rules with the level of importance ★★★☆☆ **should** be compliant
- rules with the level of importance ★★☆☆☆ **may** be compliant

1.1. Compliance by level of importance

Level of importance	# of rules	# of rules with full compliance	# of rules with partial compliance	# of rules without compliance	# of rules not applicable
mandatory ★★★★★	1	1	0	0	0
strongly recommended ★★★★☆	36	10	10	6	10
recommended ★★★☆☆	2	1	0	0	1
for information only ★★☆☆☆	1	0	0	1	0

1.2. Compliance grid

Rule patterns:

- TMF-PxCyPz: rule refers to TMF 630 Guidelines Part x, Chapter y and Paragraph z
- TMF-OAR-x: Orange Additional Rule

Rule	Summary	Level of importance	Compliance	Blocking items	Comments
↻ TMF-P1C1P5	General: request and response HTTP headers must be valid	☆☆	Yes		
↻ TMF-P1C2P2	Domain and URI naming standards: resource model and naming - Variable path segments contain unique resource identifiers only	☆☆☆	Partial		- compliant items: 14 - not compliant items: 2
↻ TMF-P1C2P3	Domain and URI naming standards: resource ID and href are mandatory attributes	☆☆☆	Partial		- compliant items: 16 - not compliant items: 1 - items to check manually: 3
↻ TMF-P1C2P4	Domain and URI naming standards: resource naming convention must be followed	☆☆☆	Partial		- compliant items: 11 - not compliant items: 5
↻ TMF-P1C2P5	Domain and URI naming standards: resource fields convention must be followed	☆☆☆	Yes		
↻ TMF-P1C3P1	Uniform contract methods and media types: uniform contract operations	☆☆☆	Yes		
↻ TMF-P1C3P3	Uniform contract methods and media types: API response status - Never define nor use custom status codes	☆☆☆	Yes		
↻ TMF-P1C3P4-1	Uniform contract methods and media types: user, application and extended error codes - Errors must set HTTP error status, never 2xx	☆☆☆	Yes		
↻ TMF-P1C3P4-2	Uniform contract methods and media types: user, application and extended error codes - Error representation in response body must match recommended structure	☆☆☆☆	Yes		
↻ TMF-P1C3P5	Uniform contract methods and media types: representations - No file extensions (e.g. .js, .json) to path segment, media type selection must be signaled with Accept header	☆☆☆	Yes		
↻ TMF-P1C4P1	Query resources patterns: query single resource all attributes	☆☆☆	Partial		- compliant items: 7 - items to check manually: 4
↻ TMF-P1C4P2	Query resources patterns: query multiple resources	☆☆☆	Partial		- compliant items: 6 - items to check manually: 3
↻ TMF-P1C4P3	Query resources patterns: query partial resource representation or attribute selection	☆☆☆	Yes		
↻ TMF-P1C4P4	Query resources patterns: query resources with attribute filtering	☆☆☆	Partial		- compliant items: 3 - not compliant items: 3 - items to check manually: 3
↻ TMF-P1C4P5	Query resources patterns: paging	☆☆☆	Partial		- compliant items: 2 - not compliant items: 1 - items to check manually: 6
↻ TMF-P1C4P7	Query resources patterns: sorting	☆☆☆	Partial		- compliant items: 5 - not compliant items: 4

Rule	Summary	Level of importance	Compliance	Blocking items	Comments
🔗 TMF-P1C5P1	Modify resources patterns: uniform contract operations for modifying resources	★ ★ ★	Yes		
🔗 TMF-P1C5P2	Modify resources patterns: replace all attributes of a resource	★ ★ ★	Not applicable		
🔗 TMF-P1C5P3P4P5	Modify resources patterns: modify attribute subset of a resource, modify multi-valued attribute, JSON-Patch extension to manage arrays	★ ★ ★	Yes		
🔗 TMF-P1C6P1	Create resource patterns: creating a single resource	★ ★ ★	Partial		- compliant items: 1 - not compliant items: 1
🔗 TMF-P1C6P2	Create resource patterns: creating multiple resources	★ ★ ★	Yes		
🔗 TMF-P1C6P3	Create resource patterns: creating a single resource with attribute selection	★ ★ ★	Not applicable		
🔗 TMF-P1C7	Delete resource pattern	★ ★ ★	No		
🔗 TMF-P1C8P1	Task resource pattern: modeling complex operations with task resources	★ ★ ★	Not applicable		
🔗 TMF-P1C9	Monitor pattern	★ ★ ★	Not applicable		
🔗 TMF-P1C10P1P2	Notification patterns: register/unregister listener	★ ★ ★	Not applicable		
🔗 TMF-P1C10P3	Notification patterns: publishing events	★ ★ ★	Not applicable		
🔗 TMF-P1C11P1	Versioning: API version must be defined in the base path	★ ★ ★	No		
🔗 TMF-P1C12P3	Event management: event resource	★ ★ ★	Not applicable		
🔗 TMF-P1C12P4	Event management: topic resource	★ ★ ★	Not applicable		
🔗 TMF-P4C1P1	Export and import data tasks: export job resource	★ ★ ★	Not applicable		
🔗 TMF-P4C1P2	Export and import data tasks: import job resource	★ ★ ★	Not applicable		
🔗 TMF-OAR-1	[Orange Specific] GET /status operation returns service status info	★ ★ ★	No		
🔗 TMF-OAR-2	[Orange Specific] GET /doc URI returns Swagger JSON file representation	★ ★ ★	No		
🔗 TMF-OAR-3	[Orange Specific] GET /version operation returns information about the version	★	No		
🔗 TMF-OAR-4	[Orange Specific] Prefix custom header names using X-<service>-* pattern (e.g. X-ISS-Key where ISS means for IoT Service Suite)	★ ★	Not applicable		
🔗 TMF-OAR-5	[Orange Specific] The server is reachable via a DNS name	★ ★ ★	No		
🔗 TMF-OAR-6	[Orange Specific] The API is a unique dedicated sub-domain or path	★ ★ ★	No		

Rule	Summary	Level of importance	Compliance	Blocking items	Comments
↻ TMF-OAR-7	[Orange Specific] Use Location header to return the URI of the newly created resource	★ ★ ★	Yes		
↻ TMF-OAR-8	[Orange Specific] API documentation complies with Swagger 2.0 or OpenAPI 3.0 specifications and Orange recommendations	★ ★ ★	Partial		- not compliant items: 13 - items to check manually: 39

2. Assumptions

Summary: Resource types

In order to be able to apply some rules, the compliance service tries to determine the type of resource represented by each path

Item	JSONPath Location	Comments
/productInventoryManagement/v1/product	['paths']['/productInventoryManagement/v1/product']	- According to HTTP methods used and/or the path format, the path represents a collection
/productInventoryManagement/v1/product/{id}	['paths']['/productInventoryManagement/v1/product/{id}']	- According to HTTP methods used and/or the path format, the path represents a single resource
/productInventoryManagement/v1/product/export	['paths']['/productInventoryManagement/v1/product/export']	- According to HTTP methods used and/or the path format, the path can represent a singleton or a collection
/productInventoryManagement/v1/job/uploadFileUrl/{JobId}	['paths']['/productInventoryManagement/v1/job/uploadFileUrl/{JobId}']	- According to HTTP methods used and/or the path format, the path represents a single resource
/productInventoryManagement/v1/jobSpecification	['paths']['/productInventoryManagement/v1/jobSpecification']	- According to HTTP methods used and/or the path format, the path represents a collection
/productInventoryManagement/v1/jobSpecification/{id}	['paths']['/productInventoryManagement/v1/jobSpecification/{id}']	- According to HTTP methods used and/or the path format, the path represents a single resource
/productInventoryManagement/v1/job/{id}	['paths']['/productInventoryManagement/v1/job/{id}']	- According to HTTP methods used and/or the path format, the path represents a single resource
/productInventoryManagement/v1/job	['paths']['/productInventoryManagement/v1/job']	- According to HTTP methods used and/or the path format, the path represents a collection
/productInventoryManagement/v1/jobSpecification/{jobSpecificationId}/Job	['paths']['/productInventoryManagement/v1/jobSpecification/{jobSpecificationId}/Job']	- According to HTTP methods used and/or the path format, the path can represent a singleton or a collection
/productInventoryManagement/v1/job/{id}/exportFileInformation	['paths']['/productInventoryManagement/v1/job/{id}/exportFileInformation']	- According to HTTP methods used and/or the path format, the path can represent a singleton or a collection
/configuration	['paths']['/configuration']	- According to HTTP methods used and/or the path format, the path can represent a singleton or a collection
/status	['paths']['/status']	- According to HTTP methods used and/or the path format, the path represents a reserved path to get the API status
/version	['paths']['/version']	- According to HTTP methods used and/or the path format, the path represents a reserved path to get the API version
/productInventoryManagement/v1/reports	['paths']['/productInventoryManagement/v1/reports']	- According to HTTP methods used and/or the path format, the path can represent a singleton or a collection
/productInventoryManagement/v1/reports/{atType}/{id}	['paths']['/productInventoryManagement/v1/reports/{atType}/{id}']	- According to HTTP methods used and/or the path format, the path represents a single resource
/productInventoryManagement/v1/reports/productOfferingOptions	['paths']['/productInventoryManagement/v1/reports/productOfferingOptions']	- According to HTTP methods used and/or the path format, the path can represent a singleton or a collection

3. Compliance

Rule: **TMF-P1C1P5**

Summary: **General: request and response HTTP headers must be valid**

Level of Importance: **recommended** ★★

Item	JSONPath Location	Compliance	Comments
X-Result-Count	\$['paths']['/productInventoryManagement/v1/product']['get']['responses']['200']['headers']['X-Result-Count']	✓	
X-Total-Count	\$['paths']['/productInventoryManagement/v1/product']['get']['responses']['200']['headers']['X-Total-Count']	✓	
Location	\$['paths']['/productInventoryManagement/v1/product']['post']['responses']['201']['headers']['Location']	✓	
X-Result-Count	\$['paths']['/productInventoryManagement/v1/jobSpecification']['get']['responses']['200']['headers']['X-Result-Count']	✓	
X-Total-Count	\$['paths']['/productInventoryManagement/v1/jobSpecification']['get']['responses']['200']['headers']['X-Total-Count']	✓	

Rule: **TMF-P1C2P2**

Summary: **Domain and URI naming standards: resource model and naming - Variable path segments contain unique resource identifiers only**

Level of Importance: **strongly recommended** ★★★

Item	JSONPath Location	Compliance	Comments
/productInventoryManagement/v1/product	\$['paths']['/productInventoryManagement/v1/product']	✓	
/productInventoryManagement/v1/product/{id}	\$['paths']['/productInventoryManagement/v1/product/{id}']	✓	
/productInventoryManagement/v1/product/export	\$['paths']['/productInventoryManagement/v1/product/export']	✓	
/productInventoryManagement/v1/job/uploadFileUrl/{JobId}	\$['paths']['/productInventoryManagement/v1/job/uploadFileUrl/{JobId}']	✗	- The identifier "JobId" must be renamed "id" or "uploadFileUrlId"
/productInventoryManagement/v1/jobSpecification	\$['paths']['/productInventoryManagement/v1/jobSpecification']	✓	
/productInventoryManagement/v1/jobSpecification/{id}	\$['paths']['/productInventoryManagement/v1/jobSpecification/{id}']	✓	
/productInventoryManagement/v1/job/{id}	\$['paths']['/productInventoryManagement/v1/job/{id}']	✓	
/productInventoryManagement/v1/job	\$['paths']['/productInventoryManagement/v1/job']	✓	
/productInventoryManagement/v1/jobSpecification/{jobSpecificationId}/Job	\$['paths']['/productInventoryManagement/v1/jobSpecification/{jobSpecificationId}/Job']	✓	

Item	JSONPath Location	Compliance	Comments
/productInventoryManagement/v1/job/{id}/exportFileInformation	\$['paths']['/productInventoryManagement/v1/job/{id}/exportFileInformation']	✓	
/configuration	\$['paths']['/configuration']	✓	
/status	\$['paths']['/status']	✓
